Battery Recycling Policy

At CMS Electracom, we are committed to a GREENER world.

An important aspect of these guidelines relates to the “End of Life Management” of the batteries in our ‘Freedom’ range of products.

Being conscious of the raw materials and energy that went into the initial manufacturing of our product, as well as the potentional for contamination, we don’t wish to see these resources end up in land fill.

When you purchase our Freedom Battery System, we will guarantee to receive these batteries back at the end of its in-use phase for recycling. The used batteries need to be to be delivered by the client to one of our recycling partners.

As more than 95% of the materials in batteries can be recycled, CMS Electracom will then arrange to have the product recycled in compliance with Best Practice Guidelines. Recycling Freedom batteries will ensure these materials are used again, often to make new batteries.

Please contact your CMS representative for more details on our battery recycling program.
